

Cybeats Announces Cyber Deal With Top 10 Global Medical Company

TORONTO, April 22, 2024 – Cybeats Technologies Corp. (“Cybeats” or the “Company”)(CSE: CYBT, OTCQB: CYBCF), a Company offering industry-leading cybersecurity software, is pleased to report a contract renewal for its product, *SBOM Studio*¹, with a Top 10 global Medical Device Manufacturer (“MDM”) that has a \$70 Billion USD market cap.²

The FDA, which oversees medical device security, released new guidelines that stress the importance of SBOM (“Software Bills of Materials”), for ensuring medical devices remain safe and effective against cyber threats. The guidelines emphasize traceability and leveraging SBOMs to provide a deep understanding of software components, which helps MDM spot risks and weaknesses, leading to more precise and effective cybersecurity practices.

SBOM Studio allows MDM to understand their software more effectively, including in the third-party and open-source components they deploy, and comply with the FDA’s new cybersecurity regulations. This contract follows several other engagements from the Global Top 10 MDM, including from late 2023³ and February 2024⁴, all of which help sustain Cybeats’ 100% client retention rate, and demonstrate significant product uptake and clear value proposition to the healthcare industry.

“The commercial momentum in the medical device space is very encouraging for Cybeats, especially given the foresight of a product that anticipated the widespread need for SBOM management solutions. This Fortune 500 client choosing to renew their licence with SBOM Studio not only further cements our 100% client retention rate but validates the pivotal role of SBOM Studio in fortifying software supply chains in the medical space,” said **Justin Leger, CEO, Cybeats.**

Cybeats is pleased to announce its participation in the H-ISAC (Health Information and Sharing Analysis Center) ‘Spring Americas Summit’ on May 20-24 in Orlando, FL.⁵ The event will cover pressing cybersecurity issues in the healthcare industry and industry best practices, including the vital role of third party component tracking, transparency and the role of SBOM in the medical industry. With regulations and industry pressures looming, the reason companies keep choosing SBOM Studio is becoming more clear and understandable.

The U.S. Food and Drug Administration’s (“FDA”) solidified its role in regulating medical device

cybersecurity with its authority to approve or reject premarket submissions based on compliance with section 524B of the Federal Food, Drug, and Cosmetic Act ("FD&C Act").⁶ This section mandates that Medical Device Manufacturers ("MDM") provide a SBOM for their devices' commercial, open-source, and off-the-shelf software components. To proactively manage cybersecurity risks, MDMs must maintain an accurate inventory of device components, develop vulnerability management and risk assessment processes, provide device patches, and maintain device change records. The FDA's Refuse-to-Accept ("RTA") authority emphasizes the significance of SBOM management solutions like *SBOM Studio*.
